See me

Understand me

6094 Cocoa Walnut EW

Kronospan Natural Touch makes every other wood effect panel seem like a bad imitation.

You can feel it - the first embossed-in-register board – where the grain texture precisely matches the surface finish.

Now the authentic look and feel of real timber – the graining, the subtle variations of shade and tone - is accessible on almost any project.

A modern interior space featuring a wall of stacked wood blocks, concrete steps, and a planter with a tree and pebbles. The scene is lit with warm, ambient lighting, creating a cozy and sophisticated atmosphere. The wood blocks are arranged in a staggered, stepped pattern, and the concrete steps lead up to a higher level. The planter contains a small tree and is filled with white pebbles. The overall design is clean and minimalist, with a focus on natural materials and textures.

Use me

where you would have used expensive, deep-grained wood.

Natural Touch takes wood's beautiful variability and delivers it consistently.

Use it as a direct replacement for timber. Take the opportunity to have rustic realism where you might otherwise have settled for veneer.

And don't give a thought to wood's cost or other disadvantages.

Rely on me

for special projects, premium applications.

Clad walls, build furniture, create fixtures, make striking punctuations to your spaces and your surfaces – just like you would have done with wood.

Except that now you can ignore wood's limitations.

Trust me

for sustainability. All board FSC certified.

Kronospan leads in sustainable board production.

Everything we make is FSC accredited. Our recycling plant means more waste wood than ever is transformed into useful, beautiful building products.

Care for me

letting me to look good for longer.

The advantages of NaturalTouch extend throughout your project's life.

All NaturalTouch boards are pre-finished, suffer no colour variation and offer enhanced durability. To retain the good looks a simple wipe is all that's needed, so you can forget about expensive long-term timber troubles.

Cut me

as i'm easier to work than wood.

No knots, sap or warping, precision and predictability make more things possible.

Pre-fabricate structures to engineering tolerances. Know that on-site assembly or erection will be easier and faster.

Relax. You're more likely to achieve the right result.

Afford me

Rare timbers cost no more.

Hemlock Nordique, Elm Lava, Cinnamon Walnut and three kinds of oak.

Now the budget can't hold you back on species. Mix exotics with elm or ash. Set your imagination free – there is no premium to pay.

Choose me from 14 stunning designs.
