

SERVO-DRIVE

Ordering and
planning information

The electronic motion support system for pull-outs and wall cabinets

A light touch suffices and pull-outs and wall cabinets seem to open by themselves. For base cabinets, wall cabinets and appliance cabinets. With SERVO-DRIVE, SERVO-DRIVE uno and SERVO-DRIVE flex. One system for the whole kitchen with tailored solutions for all requirements.

Blum distance bumper

The Blum distance bumper ensures the required trigger path of 2 mm.

Bracket profile

The drive units are attached to the bracket profile.

Bracket profile attachment and bracket profile cover cap

These components are used to attach the bracket profile to a horizontal and/or vertical cross member.

Horizontal bracket profile

The drive unit is attached to the bracket profile using the bracket profile adapter.

Bracket profile attachment

This component is used for attaching the horizontal bracket profile.

Bracket profile adapter for drive unit

The adapter is used to attach the drive unit to the horizontal bracket profile.

Attachment bracket 1 tier

You can use attachment brackets if single pull-outs are to be operated or if the installation situation does not permit a continuous bracket profile.

Upper attachment bracket with pre-assembled adapter for the drive unit

The drive unit is fixed to the adapter for the upper attachment bracket.

Drive unit

The drive unit is supplied with a lever extension. The lever extension must be removed in special applications such as narrow cabinets so that the drive unit can be installed (see planning information).

Lever cap for LEGRABOX

Prevents collision with the LEGRABOX steel back from height M with an internal cabinet width LW of 267–286 mm.

Trigger guidance for TANDEMBOX

Prevents the lever from colliding with TANDEMBOX back fixing (LW 242-316 mm), in combination with a chipboard back.

SERVO-DRIVE power supply unit

The SERVO-DRIVE power supply unit can be used around the world. It converts the country-specific mains voltage to 24 V direct current. You must use a flex with a regular plug for the respective country. The SERVO-DRIVE power supply unit is used to supply several drive units with power (throughout the entire kitchen).

Power supply unit housing
Base fixing

The power supply unit housing for base fixing securely accommodates the SERVO-DRIVE power supply unit on the base of the cabinet.

Power supply unit housing
Back panel/wall fixing

The SERVO-DRIVE power supply unit can be attached to the wall or back panel with the power supply unit housing for back panel/wall fixing.

SERVO-DRIVE plug-in power supply unit

The SERVO-DRIVE plug-in power supply unit supplies power to a single drive unit (single application).

SERVO-DRIVE distribution cable

The distribution cable supplies power to the drive units. The max. permitted operating voltage is 24 V.

Note: This cable must not be directly connected to the mains power outlet.

Connecting node

This node establishes the electrical connection between the SERVO-DRIVE distribution cable and the bracket profile and/or the SERVO-DRIVE power supply unit.

Cable end protector

The cable end protector is fitted onto the unused ends of the cable.

Drip protection feature for attachment bracket 1 tier

The drip protection feature prevents water from penetrating the SERVO-DRIVE drive unit. Suitable for applications with an attachment bracket 1 tier.

Drip protection feature for horizontal applications

The drip protection feature prevents water from penetrating the SERVO-DRIVE drive unit. Suitable for applications with a horizontal bracket profile.

Locating bracket

No pre-drilling, self-adhesive
For positioning the SERVO-DRIVE uno unit.

Steel back height M

Steel back for TANDEMBOX – top mount waste bin solution.

Steel back for waste bin pull-out

Special back for TANDEMBOX – top mount waste bin solution.

Attachment left/right

These components are used to attach the steel back for TANDEMBOX – top mount waste bin solution.

Rectangular longside gallery rail left/right

Gallery can be used in combination with TANDEMBOX.

Transport protection

Serves to protect the SERVO-DRIVE uno set during transportation. Remove before use.

Accessories

Cable holder

The cable holder allows you to route the SERVO-DRIVE distribution cable safely and neatly.

Front/base stabiliser

For TANDEMBOX:

Stabilises wide and high fronts. Reinforces the connection between drawer side and front.

For LEGRABOX/MERIVOBX:

Stabilises wide drawer bases. Reinforces the connection between base and front.

Synchronisation cable

The synchronisation cable allows you to synchronise two interconnected drive units.

Colour/material

WGR	White grey	R7035	RAL 7035 light grey
SZ	Black	R7037	RAL 7037 dust grey
WS	White	K	Nylon
TGR	Dark grey	ZN	Zinc plated

SERVO-DRIVE can be used in combination with AMPEROS AC from a minimum internal width of 562 mm.

Standard cabinet with horizontal and vertical cross members

- Electrical motion support system in combination with BLUMOTION for soft and effortless closing
- With vertical bracket profile
- No fixed connection between the drive unit and pull-out
- Pull-outs need not be modified
- Tool-free drive unit assembly
- Simple cabling
- Shallow installation depth

Notes

SERVO-DRIVE flex

Electrical opening support system for handle-less built-in refrigerators

Overview

Drive unit

The drive unit triggers an ejection rod which opens the door. After the door is opened, the rod retracts automatically. In the event of unintentional opening, the drive unit closes the door again after 2.5, 4 or 8 seconds.

Rod cover cap

The rod cover cap seals the gap between the blind front and the rod. The gap ensures that the rod can eject the door and retract as required.

Blind front fixing

The blind front fixing connects the blind front to the mounting plate and makes assembly and removal easy.

Blum distance bumper

The Blum distance bumper ensures the required trigger path of 2 mm.

Catch plate

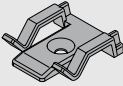

The catch plate serves as a locator for the magnetic rod in order to close the appliance door.

Cable end protector

The cable end protector is fitted onto the unused ends of the cable.

Cable holder

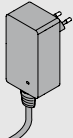

The cable holder allows you to route the SERVO-DRIVE distribution cable safely and neatly.

SERVO-DRIVE switch

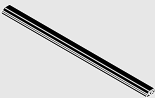

The SERVO-DRIVE switch triggers the opening signal for the appliance door and enlarges the trigger range.

SERVO-DRIVE plug-in power supply unit

The SERVO-DRIVE plug-in power supply unit supplies power to a single drive unit (single application).

SERVO-DRIVE distribution cable

The distribution cable supplies power to the drive units. The max. permitted operating voltage is 24 V.

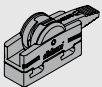

Note: This cable must not be directly connected to the mains power outlet.

Chipboard screws

The chipboard screws secure the drive unit, mounting plate and catch plate.

Connecting node

This node establishes the electrical connection between the SERVO-DRIVE distribution cable and the SERVO-DRIVE power supply unit.

Assembly jig

The assembly jig helps you attach the mounting plate correctly inside the cabinet.

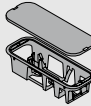

Mounting plate

The mounting plate is screwed inside the cabinet and is used to attach the drive unit and blind front.

Power supply unit housing

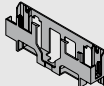

Base fixing

The power supply unit housing for base fixing securely accommodates the SERVO-DRIVE power supply unit on the base of the cabinet.

Power supply unit housing

Back panel/wall fixing

The SERVO-DRIVE power supply unit can be attached to the wall or back panel with the power supply unit housing for back panel/wall fixing.

SERVO-DRIVE power supply unit

The SERVO-DRIVE power supply unit can be used around the world. It converts the country-specific mains voltage to 24 V direct current. You must use a flex with a regular plug for the respective country.

The SERVO-DRIVE power supply unit is used to supply several drive units with power (throughout the entire kitchen).

Recess height (NH) < 1700 mm

- Can be used for all standard built-in refrigerators and freezers
- Recess height (NH) < 1700 mm
- Low recess height (NH) for drive unit of min. 60 mm
- Adaptive system/automatic adjustment of the ejection force to the stay close force of the appliance door
- Automatic self-closing system for unintentional opening
- Lean protection feature
- Trigger safety
- Adjustable hold-open time (2,5 sec, 4 sec, 8 sec)
- Easy assembly thanks to feedback on correct installation depth via LED
- Not suitable for refrigerators without their own cabinet, with self-opening, with child safety latch, with automatic self-closing system, appliances with freezer at the bottom (recess height (NH) ≥1700 mm) and refrigerated drawers

Accessories

Cable holder			
	Colour	Material	
	WS	K	Z10K0009

Recess height (NH) ≥ 1700 mm

Planning

Mounting plate	Blind front – drive unit	Blum distance bumper
		<p>Blum distance bumper is required for the refrigerator and freezer door</p>
		<p>The Blum distance bumper ensures the required trigger path of 2 mm</p>

Access gap	

Space requirement and safety distance – power supply unit housing		
		<p>Please note</p> <p>Maintain a safety distance of 30 mm for air circulation. Otherwise there is a risk that the SERVO-DRIVE power supply unit could overheat. The dimensions in the drawing take the safety distance into account.</p>
<p>Base fixing</p>	<p>Back panel/wall fixing</p>	

Notes

Recess height (NH) ≥ 1700 mm

- Can be used for all standard built-in fridge/freezer combinations
- Recess height (NH) ≥ 1700 mm
- Low recess height (NH) for drive unit of min. 60 mm
- Adaptive system/automatic adjustment of the ejection force to the stay close force of the appliance door
- Automatic self-closing system for unintentional opening
- Lean protection feature
- Trigger safety
- Adjustable hold-open time (2,5 sec, 4 sec, 8 sec)
- Easy assembly thanks to feedback on correct installation depth via LED
- Not suitable for refrigerators without their own cabinet, with self-opening, with child safety latch, with automatic self-closing system, fridge-freezers with ventilation, appliances with freezer at the bottom (recess height (NH) ≥ 1700 mm) and refrigerated drawers

Drilling template for Blum distance bumper, see page 65

A modern kitchen scene with a woman sitting on a stool at a kitchen island and a man cooking in the background. The kitchen features a long island with a wooden countertop and a man in a striped shirt cooking. A woman is sitting on a black stool at the island. The room has large windows, a dining table, and a herringbone wood floor.

moving ideas

You've got ideas, and so have we. Let's combine our creativity to turn good ideas into great ones. Inspiration moves us, and we excel at bringing it to life with our top quality, innovative products, designed to meet every requirement. We also offer comprehensive services and assembly devices to make life easier still. All this enables us to realise our goal of delivering quality and easy living in the home. Let's move ideas together.

Quality of living

Our mission is to deliver beauty and convenience for a better quality of living.

Product range

Our extensive product range has everything you need to turn your ideas into reality.

Inspiration

We monitor global trends and innovate to create solutions for tomorrow.

Innovation

We keep moving forward and constantly develop new products and services for you.

Services

Our services are tailored to your needs with one simple goal: to make your life easier.

Quality

Quality is paramount, so we continuously strive to improve our products and services.

Trust

We take responsibility for partnerships, our employees, society and the environment.

It all started with Julius Blum and horseshoe studs in 1952. Today we develop and supply top quality furniture fittings to customers in over 120 countries around the world.
